

## INTERESTING INFORMATION ABOUT OZONE

1. Ozone is neither toxic nor poisonous.
2. By using ozone, chlorine will be reduced to 70% less than normal dosage, so you can easily avoid the eye, skin irritation & the smell of the chlorine in water.
3. It is much recommended for public swimming pools special for the children health.
4. The Ozone system is extremely SAFE. Ozone is produced constantly, but at very low levels. It has been used for over 30 years.
5. It is never released in dangerous quantities. The maximum output of ozone from Ozone generator is 0.1ppm, which is well within safety limits. In fact most big cities such as Cairo or Los Angeles have a constant level of Ozone in the air of between 0.2 and 0.5ppm.
6. Ozone is backed by the Environmental Protection Agency (EPA) in the US.
7. Ozone is a very safe and productive element when used correctly.
8. There is no potential for over-ionization by the user as this ozone output is constant and cannot be regulated.
9. Ozone can be used in conjunction with salt water without any complications. As a matter of fact, In the US there is a lot of systems that are a Salt/Ozone Combo Sanitation System. The two compounds (NaCl and O<sub>3</sub>) actually compliment each other in sanitizing water.
10. Ozone is used through the US, Europe, Australia, Asia and the Middle East for sanitizing water. With ozone, you can use the UV light to generate ozone and once the ozone reacts with biological and viruses, it reverts back to regular breathable oxygen.
