

FEW & EASY TIPS WILL HELP YOU TO ENJOY A HEALTHIER, CLEARER & CLEANER POOL

1. Be sure that the walls & bottom of the pool are always free of bacteria & algae
2. Always check the concentration of the chlorine, as long as it is higher concentration you will get the best result for clean crystal water .
3. Check the components & origin of all the chemicals before using it into your pool .
4. Be sure the pH is adjusted between 7.2 & 7.6 before carrying out any chemical treatment to your pool, otherwise it will be useless .
5. Always maintain chlorine residual between 0.1 & 1 ppm .
6. Follow the following steps regularly to remove algae:-
 - a. Brush the pool walls and floor daily.
 - b. Add chlorine solution.
 - c. Run the pool filter continuously.
 - d. Add Flocc tablets to the skimmer.
 - e. Vacuum the pool to waste.
 - f. Back wash the filter.
 - g. Adjust the pH.
7. In case the pool water gets cloudy, follow the following steps:-
 - a. Backwash and if the media is not changed since 3 years of more, then it is time to change it.
 - b. If it is not pure within 72 hours, perform a full flocculation treatment.
